Waterproof TV

Due to the waterproof installation of the electronic components (according to protection class IP65), you can use the Smart devices carefree in any damp and wet areas.

PVR, Personal Video Recorder, allows for time-shifted television. The PVR recording function allows you to record your favorite shows and movies using a USB flash drive or an external hard drive

The 12 Volt DC operation guarantees safety in wet areas and allows the installation of the AQUUA TV even in the shower! The bathroom is subject to strict regulations, with the 12 Volt-DC operation you are on the safe side.

You can choose between different types of glass to match the desired style. All options convince with a resistant, scratch-resistant and easy-to-clean surface.

The vibration speaker, or resonance body speaker, is permanently installed in the Aquarius TV. It does not require any holes in the glass, which would be a way for water entering the TV. The vibration speaker transforms the glass into a resonating body.

The integrated Triple Tuner allows the connection of all transmission systems: Satellite (DVB-S2), Cable (DVB-C) and Terrestrial, (DVB-T2). Simply connect the corresponding cable directly to the Aquarius TV and start the channel scan. There is no need for external receivers.

We recommend using a subscription card from your provider, as the connection is located on the back of the Bathroom TV.

Each mirror TV is individually planned and designed according to your specifications and wishes. Thus, each final project becomes a high-quality unique item.

STANDARD MODELS

- Television Set
- Installation System
- Remote Control
- Power Supply (if applicable)
- Accessories (if applicable)
